<sup>\*1</sup> If you program these settings using one of the units, you do not need to program the same item using another unit.

- \*2 This feature allows the unit to automatically adjust the date and time each time caller information including date and time is received.  
To turn this feature on, select “**Caller ID auto**”. To turn this feature off, select “**Manual**”. (Caller ID subscribers only)  
To use this feature, set the date and time first (page 17).
- \*3 If you subscribe to a distinctive ring service (such as IDENT-A-RING), select a tone (tone 1 to 2). If you select a melody, you cannot distinguish lines by their ringers.
- \*4 The preset melodies in this product (“**Tone 3**” - “**Tone 5**”, “**Melody 1**” - “**Melody 10**”) are used with permission of © 2012 Copyrights Vision Inc.
- \*5 This menu is not displayed when scrolling through the display menus. It is only available in direct command code.
- \*6 If you subscribe to a Caller ID service and want to view the caller’s information after lifting up the handset to answer a call, turn off this feature.
- \*7 The flash time depends on your telephone exchange or host PBX. Contact your PBX supplier if necessary. The setting should stay at “**700 ms**” unless pressing [**FLASH**] fails to pick up the waiting call.
- \*8 Generally, the line mode setting should not be changed. This setting automatically maintains receiver volume at the proper level depending on the current telephone line condition. Set the line mode to “**A**” if telephone line condition is not good.

## Alarm

An alarm sounds at the set time for 3 minutes once or daily. Alarm can be set for each handset.

### Important:

## Silent mode

Silent mode allows you to select a period of time during which the handset and/or base unit will not ring for outside calls. This feature is useful for time periods when you do not want to be disturbed, for example, while sleeping. Silent mode can be set for each unit.

This feature allows the unit to reject calls when:

- the unit receives a call from a phone number stored in the call block list as unwanted (“Storing unwanted callers”, page 32).
- the unit receives a call without phone number (“Blocking incoming

calls that have no phone number”, page 32).

When a call is received, the unit rings briefly\*1 while caller information is being received. If the caller's phone number matches an entry in the call block list, the unit emits no sound to the caller, and disconnects the call. (Caller ID subscribers only)

\*1 This is called first ring. If you do not want the first ring to sound, turn this setting to “Off” (page 33).

### Important:

- Rejected calls are logged in the caller list.

---

## Storing unwanted callers

You can store up to 30 phone numbers in the call block list.

## Registering a unit

### Operating additional units

#### Additional handsets

Up to 6 handsets can be registered to the base unit.

#### Important:

- See page 4 for information on the available model.

### Registering a handset to the base unit

The supplied handset and base unit are pre-registered. If for some reason the handset is not registered to the base unit, re-register the handset.

- If all registered handsets start ringing, press **[LOCATOR]** again to stop, then repeat this step.

**3 Handset:**

## Using Caller ID service

### Important:

- This unit is Caller ID compatible. To use Caller ID features, you must subscribe to a Caller ID service. Contact your phone service provider for details.

### Caller ID features

When an outside call is being received, the caller information is displayed.

Caller information for the last 50 callers is logged in the caller list from the most recent call to the oldest.

- If the unit cannot receive caller information, the following is displayed:
  - “**Out of area**”: The caller dials from an area which does not provide a Caller ID service.
  - “**Private caller**”: The caller requests not to send caller information.
  - “**Long distance**”: The caller makes a long distance call.
- If the unit is connected to a PBX system, caller information may not be properly received. Contact your PBX supplier.

### Missed calls

If a call is not answered, the unit treats it as a missed call. The display shows “**Missed call**”.

### Note:

- Even when there are unviewed missed calls, “**Missed call**” disappears from the standby display if the following operation is performed by one of the units:
  - A handset is replaced on the base unit or charger.
  - Pressing [**OFF**] on a handset.

### Phonebook name display

When caller information is received and it matches a phone number stored in the phonebook, the stored name in the phonebook is displayed and logged in the caller list.

- Make sure the unit’s date and time setting is correct (page 17).

- [MENU] → [↕]: "Edit" → [SELECT]
- Press [EDIT] repeatedly until the phone number is shown in the desired format.
- [↶]

---

## Caller ID number auto edit feature

Once you call back an edited number, the unit which was used to call back remembers the area code and format of the edited number. The next time someone calls from the same area code, caller information is customized by the unit as follows:

- When the call is being received, the Caller ID number is displayed in the same format as the edited number.

- After the call has ended, the caller's phone number is displayed in the same format as the edited number, when reviewed from the caller list.

For example, you can use this feature to set the unit to ignore the area code of callers in your area, so that you can call these local numbers using caller information without dialing the area code.

To activate this feature, you must edit an entry in the caller list, then call that number. After that, phone numbers from that caller's area code are edited automatically.

This feature can be set for each unit (page 28). The default setting is "On".

### Note:

- Phone numbers from the 4 most recently edited area codes are automatically edited.

---

## Erasing selected caller information

## Voice mail service

Voice mail is an answering service that may be offered by your phone service provider. This service can also record calls when you are unavailable to answer the phone or when your line is busy. Messages are recorded on the phone company system.

### Storing the voice mail (VM) access number

In order to listen to your voice mail messages, you must dial your phone service provider voice mail access number. Once you have stored your voice mail access number, you can dial it automatically (page 38).

- 1 **[MENU]** **#** **3** **3** **1**
- 2 Enter your access number (24 digits max.). → **[SAVE]** → **[OFF]**

#### Note:

- When storing your voice mail access number and your mailbox password, press **[▲]** (Pause) to add pauses (page 18) between the access number and the password as necessary. Contact your phone service provider for the required pause time.

#### Example:

1-222-333-4444	PPPP	8888
VM access number	Pauses	Password

### To erase the voice mail access number

- 1 **[MENU]** **#** **3** **3** **1**
- 2 Press and hold **[CLEAR]** until all digits are erased. → **[SAVE]** → **[OFF]**

### Voice mail (VM) tone detection

Your phone service provider sends special signals (sometimes called “voice mail tones” or “stutter tones”) to the unit to let you know you have new voice mail messages. If you hear a series of dial tones followed by a continuous dial tone after you press **[📞]**, you have new voice mail messages. Soon after you hang up a call or after the phone stops ringing, your unit checks the phone line to see if new voice mail messages have been recorded.

Turn this feature off when:

- You do not subscribe to voice mail service.
- Your phone service provider does not send voice mail tones.
- Your phone is connected to a PBX.

## Useful Information

If you are not sure which setting is required, contact your phone service provider.

### Turning VM tone detection on/off

The default setting is "On".

- 1 **[MENU]** **#** **3** **3** **2**
- 2 **[↕]**: Select the desired setting.  
→ **[SAVE]** → **[OFF]**

### Listening to voice mail messages

The unit lets you know that you have new voice mail messages in the following way:

- "New Voice Mail" is displayed if message indication service is available.

- 1 **[MENU]** **#** **3** **3** **0**
  - The speakerphone turns on.
- 2 Follow the pre-recorded instructions.
- 3 When finished, press **[OFF]**.

#### Note:

- You can also use the **[VM]** soft key, if displayed, to play new voice mail messages.
- If the handset still indicate there are new messages even after you have listened to all new messages, turn it off by pressing and holding **#** until the handset beeps.

## Wall mounting (Charger only)

# FCC and other information

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the bottom of this equipment is a label that contains, among other information, a product identifier in the format US:ACJ-----.

If requested, this number must be provided to the telephone company.

- Registration No.....(found on the bottom of the unit)
- Ringer Equivalence No. (REN).....0.1B

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A compliant telephone cord and modular plug is provided with the product. It is designed to be connected to a compatible modular jack that is also compliant.

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for the product is part of the product identifier that has the format US:AAAEQ##TXXXX. The digits represented by ## are the REN without a decimal point (e.g., 03 is a REN of 0.3).

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be

advised of your right to file a complaint with the FCC if you believe it is necessary.

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

If trouble is experienced with this equipment, for repair or warranty information, please contact a Factory Service Center or other Authorized Servicer. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

This equipment is hearing aid compatible as defined by the FCC in 47 CFR Section 68.316.

When you hold the phone to your ear, noise might be heard in your Hearing Aid. Some Hearing Aids are not adequately shielded from external RF (radio frequency) energy. If noise occurs, use an optional headset accessory or the speakerphone option (if applicable) when using this phone. Consult with your audiologist or Hearing Aid

manufacturer about the availability of Hearing Aids which provide adequate shielding to RF energy commonly emitted by digital devices.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Privacy of communications may not be ensured when using this phone.

### CAUTION:

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is

encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To minimize or prevent such interference, the base of the cordless telephone should not be placed near or on top of a TV or VCR. If interference is experienced, move the cordless telephone further away from the TV or VCR. This will often reduce or eliminate interference.
